## COLORADO

The Centennial State, admitted to the Union in 1876, is the eighth largest state in area and has the highest average elevation. The highest point is at Mount Elbert, 14,433 feet above sea level, one of the 53 "fourteeners" rising above 14,000 feet. The lowest elevation is 3,350 feet in extreme eastern Prowers County.

Approximate Land Area: 66.3 Million Acres (104,687 Sq. Miles)
Approximate Cropland Area: 11.0 Million Acres
Approximate Irrigated Area: 3.0 Million Acres
Number of Farms and Ranches (1989): 27,000
Land In Farms and Ranches (1989): 33.5 Million Acres
Average Size of Farm and Ranch (1989): 1,241 Acres

| **Farms By Type** | **Farms By Tenure** | **Farms By Class** |

July, 1990

I am pleased to offer this 1990 edition of the Colorado Agricultural Statistics bulletin. This bulletin is the state's primary source of reliable agricultural data for Colorado's agricultural industry - - producers, processors, handlers, and associated agencies and service industries.

Colorado's agricultural industry generates in excess of $10 billion of economic activity and more than 86,000 Colorado jobs. Global agriculture is highly competitive, and the value of these agricultural statistics to the industry increases as Colorado producers expand their presence in the international market.

This year's bulletin is a special issue providing a 6-year historical base of county statistics. As a special service to data users, the Colorado Agricultural Statistics Service has provided 1986 and 1987 county estimates for commodities which were eliminated from the budget in those years. In addition, it contains a brief Annual Report of the Colorado Department of Agriculture. What has not changed is the commitment to cooperation among the Colorado Department of Agriculture, the U.S. Department of Agriculture's National Agricultural Statistics Service, and Colorado's 27,000 farmers and ranchers who provide the basic data for statistics shown in this publication.

I would like to express my special appreciation to the Colorado Beef Council for its assistance in the production of this bulletin.

Sincerely,

Steven W Horn

Steven W. Horn
Commissioner

# TABLE OF CONTENTS

Colorado's rank in agriculture . . . 2
Colorado Production Indexes; Farms and land in farms . . . 3

**FIELD CROPS:**

- Principal crops; Historic acreage, production, and value . . . 4
- 1989 Crop review . . . 13
- Value of crop production . . . 17
- District and county estimates by crop:
  - Winter wheat . . . 27
  - Spring wheat . . . 35
  - Corn for grain . . . 40
  - Corn for silage . . . 48
  - Barley . . . 52
  - Oats . . . 60
  - Sorghum for grain . . . 68
  - Sugar beets . . . 73
  - Potatoes; also disposition and stocks . . . 74
  - Dry beans . . . 76
  - Hay crops . . . 81
- Grain and hay stocks . . . 105
- Barley and wheat varieties . . . 108

**FRUITS, VEGETABLES, AND MISCELLANEOUS:**

- Fruits and vegetables - 1989 review . . . 110
- Fruit production and value . . . 111
- Vegetable acreage, production, and value . . . 112
- Floriculture . . . 113
- Planting and harvesting dates . . . 114
- Precipitation . . . 115

**FARM INCOME AND PRICES:**

- Farm income and cash receipts . . . 116
- Marketing year average prices by commodity . . . 119
- Monthly prices received by commodity . . . 120

**LIVESTOCK AND POULTRY:**

- The Colorado Cattle Industry . . . 124
- 1989 Livestock review . . . 125
- Operations by specie; Inventories by class . . . 126
- Breeding hogs and pig crop . . . 130
- Sheep inshipments and wool production . . . 130
- 1987 Federal Census of Agriculture - Highlights by county . . . 131
  - Cattle, sheep, and swine inventories by county . . . 132
- Production, disposition, and income by specie . . . 136
- Livestock slaughter by specie . . . 137
- Stocker and feeder cattle inshipments . . . 138
- Feedlots and fed cattle marketings . . . 138
- Cattle on feed . . . 139
- Dairy and dairy products . . . 141
- Poultry . . . 143
- Pasture and range feed condition . . . 145
- Livestock; Number on farms and inventory value . . . 145

---

1/ Includes Durum wheat.
2/ Excludes Durum wheat.
3/ Fresh market except where noted as processing (P).
4/ No significant commercial production in 1989 due to frost.
5/ Inventory January 1, 1990 for cattle and sheep; December 1, 1989 for hogs and chickens.
6/ Cows and heifers that have calved.
7/ As of 1/1/90.
8/ 13 major feeding states.
9/ Hens and pullets of laying age.

## CROP AND LIVESTOCK INDEXES

Production indexes are used to measure year-to-year changes in the gross output and to compare the overall level of production with a base period. The base year for the Colorado production index is consistent with the national level for production and price indexes.

For each year, the production for each commodity is multiplied by its 1977 season average price to obtain a value of production. These values are totaled by subgroups and groups which are divided by the comparable 1977 values to obtain the percent each year is of the base period. By using a constant per-unit value for each commodity throughout the series, changes in the index reflect the actual changes in production of the commodities from year to year as well as the change in production compared with the base period.

1/ Yield and production, clean basis.

# 1989 CROP REVIEW

The 1989 All Crops Production Index declined 4 points from a year earlier to 128 percent of the 1977 base period. Sharp declines in the Food Grains and Fruit Indexes and moderate declines in the Hay and Silage and Vegetable Indexes more than offset sharp increases in the Potato and Other Crop Indexes and a smaller increase in the Feed Grains Index. Overall production of crops and value of production for Colorado's principal crops declined from a year earlier.

For the fifth consecutive year, corn for grain continued to be Colorado's largest grain crop with a total production of nearly 135 million bushels. Producers harvested 930,000 acres for grain in 1989, the largest acreage since 1933. The average yield fell to 145 bushels per acre which was 15 bushels below the record high yield of the previous year. The record high 1989 crop was 5 percent higher than the 1988 output.

The 1989 winter wheat crop declined 25 percent from a year earlier to 57.2 million bushels, the smallest crop since 1977. A large part of the decline was due to the unusually large abandonment of 500,000 acres compared with only 200,000 acres of abandonment a year earlier. Drought, extreme cold weather in February, and freezing temperature in April all contributed to the loss of acres for harvest in 1989. The yield per acre also fell to 26 bushels compared with 33 bushels the previous year. The decrease in yield was due primarily to drought conditions which caused premature development of the crop.

The 1989 production of corn silage, sorghum for grain, sorghum for silage, spring wheat, oats, barley, sugar beets, dry beans and potatoes was higher than a year earlier while the output for rye, alfalfa hay and other hay was lower than 1988 production levels. Fall potato production increased 8 percent in 1989 to 20,603,000 cwt, the largest crop on record. The summer potato crop of 1,984,000 cwt, was up 7 percent from the previous year as a result of more acres harvested. Dry bean production increased to 3,108,000 cwt. compared with 2,558,000 cwt. in 1988, primarily the result of an increase in acres harvested but also from increased yields per acre.

Grain sorghum experienced a 37 percent increase in production to 11,375,000 bushels. This large change was a result of an increase of 145,000 acres harvested for grain. This more than offset the decline in yield from 46 bushels in 1988 to 35 bushels in 1989. Barley production totaled 12,160,000 bushels for 1989, a 4 percent increase from the previous year. A large increase in yield per acre to 76 bushels more than offset a decrease in the number of acres harvested. Sugar beet production increased to 912,000 tons for 1989, wholly the result of a larger number of acres harvested as the yield remained unchanged from a year earlier.

Planting activities in early March progressed slightly behind the normal pace, but by April they were ahead of the 5 year averages. Planting of some late season crops was slowed in late May by spring rains, but the moisture helped the dry land crops. Drought conditions in the southeast resulted in premature development of the winter wheat crop. Harvest started late for the small grains because early summer moisture slowed development. Cooler weather during the growing season delayed row crop development by as much as two weeks behind normal. Fall harvest began behind the normal start and never did catch up until completion in late November.

Winter wheat seedings for the 1990 crop began on time, but fell behind because of localized storms in the wheat areas. Fall seedings were virtually completed by late October. The wheat crop across the eastern plains went into the winter in good condition but needing additional moisture. Favored by a generally mild winter with intermittant moisture, a minor amount of high winds, and good spring moisture the crop had excellent potential on June 1.

## Field Crops: Acreage, production, and value, Colorado, 1984-85

1/ Yield, production, price, and value on clean basis. 2/ Not available. 3/ Total excluding sugar beets.

# CROPS - VALUE OF PRODUCTION

Value of production data are computed from the average prices received by producers for the quantity sold for each commodity. Since sales and price data are collected primarily from commercial channels, the averages may not accurately reflect individual sales or average value received.

Sampling and data collection procedures are designed to provide only a state level average for each commodity. Monthly prices are prepared for major items and marketing year prices are determined by the quantities marketed during the marketing year. Since sufficient data are not collected by county to reflect all types of sales, quality of product, monthly marketing percentages and other factors which determine the value received, the state average value is used as the basis for district averages with some differentials among districts based upon historical relationships and other available data. County prices are generally set at or near the district average with adjustments made for counties along district boundaries for some crops.

Field Crops: Value of production by district, Colorado, 1984-89

| District | Value per unit | | | Value of production | | |

## FRUIT CROPS - 1989

Colorado fruit growers experienced hard times in 1989 from both winter kill and late freezes. All types of fruit suffered at least some damage from adverse weather. Apples and pears had less damage and the 1989 crops were higher than the previous year. The tart cherry crop was reduced by 62 percent from a year earlier and the peach crop was totally destroyed. The total value of the 1989 fruit crops in the estimating program was $8.2 million compared with $12.5 million in 1988.

**Apple** growers harvested about an average size crop in 1989, even though a late freeze claimed a part of the potential production. Final production was estimated to be 70 million pounds, slightly over 7 percent larger than the 1988 crop. Total value of the estimated 68 million pounds utilized was $6.8 million, down 5 percent from 1988.

**Peach** production was estimated to be zero for the first time on record. Severe temperatures in February 1989 killed the peach buds and virtually eliminated the peach crop.

**Pears** were hurt the least of all the fruits in 1989. Production of 4,000 tons was up 5 percent from 1988, and the value of production was up 45 percent to $1.35 million.

**Tart cherry** production was also affected by extremely cold temperatures during the winter of 1989. Total production declined to 500,000 pounds compared with 1.3 million pounds in 1988. Growers received only 12.5 cents per pound for the 1989 crop and the total value of the 400,000 pounds utilized was down 75 percent from a year earlier to $50,000.

## VEGETABLE CROPS - 1989

Vegetable producers harvested 374,920 tons of fresh market and processing crops in Colorado during 1989 compared with 387,970 tons in 1988. The total tonnage includes only those vegetable crops for which estimates are prepared. Numerous other vegetable crops are produced in the state but are not surveyed for acreage or production data. The combined value of the 1989 crops was $71.5 million, down 4 percent from a year earlier.

**Dry storage onion** production totaled 5.52 million cwt. in 1989 compared with 5.54 million cwt. in 1988. A 2 percent increase in harvested acres was more than offset by a 2 percent decline in average yield. The 1989 crop was valued at $50.3 million, down 10 percent from 1988. Onions accounted for almost 74 percent of the total vegetable tonnage and 70 percent of the value of vegetable crops.

**Lettuce** production increased 13 percent from 1988 to 728,000 cwt. in 1989, all from a 13 percent increase in acres harvested as the average yield of 280 cwt. per acre was unchanged. An increase in the average price for the 1989 crop resulted in a 38 percent increase in total value to $9.5 million.

**Sweet corn** production, at 435,000 cwt., was down 14 percent from the 504,000 cwt. produced a year earlier. The smaller production was a result of 17 percent fewer acres harvested. The total value, at $5.4 million, was up 14 percent from the previous year.

**Carrot** production was up 6 percent in 1989 to 532,000 cwt. while value rose only 5 percent, to $4.4 million. Acres harvested was unchanged from the 1,400 acres in 1988, but the average yield increased from 360 cwt. per acre to 380 cwt. per acre in 1989.

**Cucumbers for pickles** production, at 10,560 tons, was down 35 percent from 1988 and the value of production was down 26 percent to $1.5 million. The 1989 **tomatoes for processing** production was down 71 percent as a result of a sharp decrease in acres harvested, and total value was down 62 percent to $343,000.

## Fruits: Production, price, and value, Colorado, 1981-89

| Year | Production | | Price per unit | Value of utilized production |
|---|---|---|---|---|
| | Total 1/ | Utilized | | |
| **Apples** | Million Pounds | | Cents | 1,000 Dollars |
| 1981 | 75.0 | 75.0 | 10.00 | 7,515 |

---

1/ The total covered growing area of 9,330 square feet consisted of the following: 7,630,000 square feet of glass, fiberglass, and other rigid greenhouses; 1,680,000 square feet of film plastic (single/double) greenhouses; and 20,000 square feet of shade and temporary cover. In addition, plants were produced on 15 acres of open ground.

2/ For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

3/ Value of sales includes Chrysanthemums, Standard Mums and Gladioli which are not published separately.

4/ Based on equivalent wholesale value of all sales for all crops except potted foliage plants which are based on net value of sales.

## Field Crops: Usual planting and harvesting dates, Colorado

| Crop | Ususal planting dates | Usual harvesting dates | | | Principal producing districts |
|---|---|---|---|---|---|
| | | Begin | Most active | End | |

# COLORADO FARM INCOME

Net farm income for Colorado's 27,300 farm and ranch operators totaled $751.0 million in 1988, just fractionally lower than a year earlier but well above the 1984-86 levels. Gross farm income was up nearly 11 percent from a year earlier to $4.45 billion. Receipts from farm marketings increased 15 percent but those increases were partially offset by less income from government payments and other farm income. Farm production expenses, at $3.70 billion, were up 13 percent from 1987 largely due to higher prices paid for feed, livestock, and seed purchased. The average total net farm income for 1988 was $27,509 compared with $27,933 in 1987.

1/ Includes operator households.

Cash receipts from the sale of farm products totaled $3.69 billion in 1988 compared with $3.21 billion a year earlier. Receipts from the sale of livestock and livestock products, at $2.65 billion, increased 14 percent from 1987 and accounted for 71.9 percent of the state's total. Cash receipts from crops totaled $1.04 billion in 1988, up 18 percent from the previous year. Cattle and calves (excluding dairy) brought in receipts of $2.28 billion in 1988, up 15 percent from 1987 representing 86 percent of the livestock receipts and 62 percent of the state's total cash receipts. Wheat was the second most important contributor to cash receipts, accounting for $261 million in 1988. The latest figure represented a 16 percent increase from a year earlier and accounted for 25 percent of the total crops receipts and 7 percent of the state's total receipts. Receipts from other major commodities were as follows: Corn, $215 million; vegetables, $211 million; dairy and dairy products, $161 million, hay crops, $153 million; and poultry and eggs, $114 million. Government payments declined 18 percent to $280.5 million in 1988 largely due to reduced payments for the wheat and feed grain programs. Payments for conservation programs, at $94.9 million, increased 24 percent from a year earlier as additional acreages were taken out of production. Other farm income was down 5 percent to $224.7 million. The value of non-cash income in 1988 was $160.8 million, up 1 percent from the previous year.

Farm production expenses totaled $3.70 billion in 1988, compared with $3.27 billion a year earlier. Outlays for farm origin purchases of feed, livestock, and seed increased 19 percent to $1.99 billion, representing 54 percent of the total production expenses. Purchases of manufactured inputs increased 9 percent to $239.7 million. Repairs, maintenance, and other miscellaneous product expenses totaled $470.3 million, up 10 percent while interest expenses were unchanged, at $330.5 million, and labor expenses were up 4 percent to $164.2 million.

## CASH RECEIPTS DEFINED

Cash receipt data as prepared by the Economic Research Service (ERS) reflect income derived from the sale of agricultural commodities during a calendar year for only that portion of the commodity that is sold. Whereas, value of production data for crops and livestock products as prepared by the National Agricultural Statistics Service (NASS) reflect the total value of the commodity produced based on a marketing year average price.

For certain commodities such as some fruits and vegetables which are normally sold in the same calendar year in which they were produced, cash receipt data and value of production data will be in close agreement. However, for most field crops, the marketing year will span portions of two calendar years, making the two data series non comparable. Data users should be aware of the differences between the ERS and NASS data series in their use of the data.

## PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

The basic data for prices received are provided voluntarily by producers, grain dealers, and others who purchase agricultural products. Data collected through monthly price inquiries and other survey questionnaires measure the disposition of individual commodities and the amount of product that is sold during each month of the marketing year. These monthly marketing volumes are used to weight previously estimated monthly prices to a marketing year average price. Monthly and marketing year average prices reflect all sizes and grades of each commodity sold.

1/ Includes springer heifers.

2/ Prices estimated quarterly beginning January 1982.

# THE COLORADO CATTLE INDUSTRY

Colorado's cattle industry is the state's largest single agricultural industry. Cash receipts from the sale of cattle and calves in 1988, at nearly $2.3 billion, represented nearly 62 percent of the cash receipts from all agricultural commodities. Colorado ranks 16th in the nation in the number of beef cows, is the 4th largest cattle feeding state in terms of fed cattle marketings and ranks 4th in beef production. The Colorado cattle industry has had a long, colorful and progressive history. Colorado's range cattle industry got its start during the early to mid-1800's as Spanish-Americans migrated into southern Colorado Territory with small herds of cattle. The gold rush of the 1850's attracted hordes of new residents to Colorado Territory, with many bringing teams of oxen, milk cows and a few beef animals from their eastern and mid-western origins. The legendary trail drives from Texas began around 1860 and by 1865 the Colorado cattle "boom" was underway as a few men of vision saw a budding opportunity to utilize the vast expanses of prairies, foothills and mountain meadows for grazing cattle.

The Kansas Pacific Railroad reached Denver in 1870, opening up new markets in the mid-west and east. The first government statistics on the Colorado cattle industry commenced in 1867 and showed a total of 147,000 head of cattle and calves in the territory on January 1, 1867. This is the same year the nation's oldest livestock organization, then named the Colorado Stock Growers Association, was founded. By 1872, when regular rail shipments east made Denver a major cattle market hub, the Colorado herd had expanded to 355,000 head. The 500,000 head mark was passed in 1876 (the year Colorado became a state) and reached 1,141,000 head on January 1, 1884.

As this new ranching industry grew in the 1860's and 1870's, animal ownership identification became a serious problem compounded by problems with Indians, rustlers, and the vast open ranges. Borrowing a practice from the Spanish, ranchers began branding their animals with a unique personal identification brand. This system worked so well that the Colorado Stock Growers Association was instrumental in getting the first brand law passed in 1872 and a Board of Stock Inspection implemented in the early 1880's. The first official State Brand Book was published in 1885 and for the past century a registered Colorado cattle brand, burned on the hide with a hot iron, has been accepted in the State Courts as basic evidence of livestock ownership.

By the turn of the century, cattle numbers reached 1,250,000 head and the state became home to a number of very large ranches -- some ranging cattle on over 2 million acres. It took just 17 years to reach the first million head cattle inventory, but 68 years to reach the second million head level (2,098,000 head on 01/01/52). The third million head level was reached in just 15 short years (3,017,000 head on 01/01/67).

Livestock feeding started as an industry around the turn of the century, with the introduction of irrigation and the raising of alfalfa and sugar beets. By 1930, cattle feeding had become a major industry in Colorado's livestock economy. This segment of the industry grew rapidly as pioneer cattle feeders developed technology to efficiently feed thousands of cattle at one time in a single location. The Colorado Cattle Feeders Association was founded in 1955 to concentrate on issues facing this specialized segment of the industry. On January 1, 1927 an estimated 150,000 head of cattle were being fattened in Colorado feedlots and the industry grew steadily until 1960. The next 12 years saw a rapid increase in cattle feeding and feedlot inventories reached 1,000,000 on January 1, 1972. Colorado is now the nation's fourth top producer of feedlot cattle and today nearly one-third of the state's inventory of cattle and calves is located in 295 feedlots.

The Colorado Beef Council was formed in 1965 to provide research and promote the marketing and consumption of Colorado's largest dollar volume commodity. Today the three major cattle organizations -- Colorado Cattlemen's Association, Colorado Cattle Feeders Association and Colorado Beef Council represent nearly 15,000 producers of Colorado beef.

# 1989 LIVESTOCK REVIEW

The Livestock and Livestock Products Production Index for 1989 decreased 5 points from a year earlier to 109 percent of the 1977 base period. The Meat Animal Index decreased 5 points to 103 percent of the base period, the Dairy Products Index was up 4 points to 156 percent, and the Poultry and Egg Index declined sharply to 124 percent of the 1977 base period.

The December 1, 1989 or January 1, 1990 inventory number was higher than earlier year levels for all species except chickens. The January 1, 1990 number of all cattle and calves was 2 percent higher at 2.9 million head. The January 1, 1990 all sheep and lamb inventory increased by 2 percent to 840,000 head. The total number of all hogs and pigs on hand as of December 1, 1989 was up 5 percent to 230,000 head. The all chicken inventory as of December 1, 1989 was down 8 percent to 3,659,000. Colorado is the fourth largest cattle feeding state, marketing over 2 million head of fed cattle annually and continues to be the largest sheep feeding state as several surrounding states ship their lambs into Colorado for feeding and slaughter.

Pasture and range feed condition, as of May 1, 1989 was rated at 50 percent, primarily because forage growth was severely curtailed by the lack of soil moisture during the winter and early spring. Heavy spring rains and cooler temperatures during June resulted in a significant improvement in pasture and range feed supplies by mid-summer. Scattered rain areas during July, August and September maintained favorable grazing in some areas while others continued to dry out. The continued lack of moisture during the winter was not favorable for the start of the 1990 season.

**ALL CATTLE AND CALVES** - The January 1, 1990 inventory of all cattle and calves on Colorado farms and ranches totaled 2.9 million head, up 2 percent from a year earlier. The 900,000 head of cattle on feed for the slaughter market accounted for nearly a third of the state's total inventory and was 2 percent above the previous year. All cows, at 850,000 head were down 3 percent from 1989 and beef cows, at 774,000 head, were down from 805,000 head a year earlier. Colorado's dairy herd inventory as of January 1, 1990 totaled 76,000 head, up 1 percent from 1989. Milk production, at more than 1.27 billion pounds was at a record high for the fifth consecutive year as the production per cow also reached a new record high of 16,803 pounds. The January 1, 1990 inventory value of all cattle and calves totaled just over $2.16 billion, up 7 percent from the previous year.

**SHEEP AND LAMBS** - The January 1, 1990 inventory of all sheep and lambs increased 2 percent from a year earlier to 840,000 head. Sheep and lambs on feed, at 385,000 head, increased 1 percent from a year earlier and the number of stock sheep was up 2 percent to 455,000 head. Wool production for 1989 totaled 6.34 million pounds, up slightly from 1988. With an average price of $1.34 per pound, the total value of $8.5 million was down 4 percent from a year earlier. The January 1, 1990 inventory value of all sheep and lambs totaled $70.56 million, down 5 percent from 1989.

**HOGS AND PIGS** - The December 1, 1989 inventory of all hogs and pigs in Colorado was 230,000 head, 5 percent higher than a year earlier. The breeding hog inventory was up 9 percent to 35,000 head, while the market hog inventory was up 4 percent to 195,000 head. The inventory value of all hogs and pigs at $19.895 million was up 21 percent from the previous year.

**CHICKEN AND EGGS** - The December 1, 1989 inventory of chickens of all ages, at 3,659,000, was down 8 percent from a year earlier. Hens and pullets of laying age accounted for 85 percent of the total. During the period December 1, 1988 through November 30, 1989, the state's laying flocks produced a new record high of 824 million eggs, 5 percent more than during the comparable period a year earlier and the third consecutive year of record production. The total inventory value of all chickens was $8.2 million, 29 percent above a year earlier as a higher value per bird more than offset the lower inventory.

## Livestock Operations: Number by specie, Colorado, 1982-89

# Annual Report of the Colorado Department of Agriculture

# 1989-1990

### Honorable Roy Romer, Governor

### Dr. Steven W. Horn, Commissioner

## Introduction

The Colorado Department of Agriculture was created as a department of state government in 1949, with historical roots dating back to before the turn of the century. Currently the department employs about 250 individuals around the state performing a multitude of services to the crop and livestock industries as well as providing numerous services for consumers in Colorado.

## Organization

The Colorado Agricultural Commission, a body of nine appointed by the Governor, serves to advise, counsel and direct the Commissioner of Agriculture, also appointed by the Governor. The commission is comprised of individuals of both political parties representing a cross section of the state's agricultural community.

The department is organized into five divisions, Animal Industry, Plant Industry, Stock Inspection, Inspection and Consumer Services, and Markets. These five divisions provide regulatory, inspection, and marketing assistance to Colorado's agricultural industry and provide valuable consumer protection services to the state's citizens.

## Office of the Commissioner

### Dr. Steven W. Horn, Commissioner of Agriculture

Ongoing activities in the Commissioner's Office include the activities of the Resource Analysis Section, Public Information, Personnel, Administrative Services, and the Agricultural Commission.

Fiscal Year 1989-90 was a year of transition for the department. Former Commissioner of Agriculture Peter Decker resigned in February, 1989, and an exhaustive search for a replacement was conducted by Governor Roy Romer. In May, Governor Romer appointed then Acting Commissioner Dr. Steven W. Horn to the commissioner post. Horn had served as deputy commissioner under Decker.

Under Commissioner Horn's leadership, the department began to undertake implementation of a variety of regulatory and administrative reforms that came about as a result of two intensive studies. A statewide productivity study, directed by the Governor's Office in conjunction with outside assistance from several private companies in the state, developed a number of suggestions to increase the efficiency and productivity of each agency. In addition, the Colorado Agricultural Commission conducted an exhaustive review of the regulatory functions of the department and suggested several amendments to the implementation of the agency's statutory regulatory responsibilities.

## Colorado Agricultural Commission

Chairman of the Colorado Agricultural Commission, Naioma Benson of Sterling, held six meetings of the commission in the fiscal year 1988-89. The commission provides general policy direction concerning the management of the department with respect to the enforcement of regulatory and service statutes, rules, and regulations pertaining to agriculture and consumer protection.

In addition to this general category of activities, the commission reviews all budgets of the department, promulgates rules and regulations issued by the Commissioner considered necessary, and holds hearings on issues of departmental responsibilities.

Mr. J. Marvin Willhite of Holly was appointed to the commission in 1989 to represent District 3 of the state. Mr. Lee Mortensen of Northglenn (District 1), Mr. William Warren of Keensburg (at large) and Mr. Dennis Hoshiko of Greeley (District 2) were reappointed to their positions during the year. All appointments were confirmed by the Colorado Senate. Mr. Thomas Turnbull of Carbondale (District 4) resigned his commission, and Mr. James Parker of Rifle was appointed to complete Mr. Turnbull's term.

## Resource Analysis

The Commissioner's Resource Analysis section this year completed several significant reports. The Jointed Goatgrass and Winter Annual Grasses Task Force, appointed by the commissioner, relied on Resource Analysis staff to prepare a report summarizing its findings. Based upon a detailed survey conducted by the Colorado Agricultural Statistics Service, the report indicates that wheat and barley producers suffer an estimated $24 million in losses each year due to the weed pests.

A detailed cost-benefit analysis of the department's Insectary, located in Palisade, was conducted by the Resource Analysis Section. That report showed that every dollar spent by the state of Colorado on biological pest control currently yields $9.50 in benefits to the agricultural community. The new Insectary facility, which received funding from the 1990 session of the Colorado General Assembly, will increase the benefit-cost ratio to nearly 10 to 1.

The Resource Analysis Section also conducted an exhaustive review of the department's information management needs for the next three years.

# Markets Development

### Jim Rubingh, Division Director

The Markets Division is responsible for developing new marketing opportunities for Colorado producers and processors. The division also develops promotional programs and materials, assists in expanding the state's food and agricultural processing industry, administers the Seal of Quality Program, and collects livestock and produce market news from around the state. The Division provides staff assistance to the Colorado Agricultural Development Authority.

## International Marketing

The overall goal in the international marketing program is to increase the export sales of Colorado grown and processed agricultural products. The section dissemminates trade leads compiled by embassies around the globe via computer links. The program also utilizes a U.S. Department of Agriculture grant to coordinate trade development activities with offices or trade consultants in Japan, Taiwan, England, and West Germany.

In 1989-90, the International Marketing Program participated in three food shows in West Germany, Japan, and Taiwan. The internationl program also developed a brochure in Japanese on Colorado agriculture, hosted the International Hospitality Room at the National Western Stock Show, and brought several buying missions to the state to meet with food processors.

## Direct and Domestic Marketing

Programs in Direct and Domestic Marketing are conducted to increase the sales of Colorado agricultural products both in state and throughout the U.S. This is done through a number of programs such as coordinating an annual food show and assisting companies wishing to participate in other domestic food shows. Other activities include the development and distrubution of marketing directories, such as the Hay Directory, Farm Fresh directory, and the Agricultural Trade Directory.

Direct and Domestic marketing activities in 1989-90 include the Colorado ABC Food Showcase, which exhibited over 100 products to 1,200 prospective wholesale, restaurant, and institutional food buyers.

The Markets Division's direct and domestic marketing effort also represented Colorado food processors at food shows around the country.

The section sponsored promotional activities including weekly, television promotional features on various Colorado food products and the annual Governor's Restaurant Award. In conjuction with the Colorado State Fair, the section sponsored the Kids' Choice competition, the Seal of Excellence competition, and Centennial Farms recognition. *I Grew Up In Colorado* stickers were also provided to producers to identify Colorado grown products.

## Food Processing

To assist in increasing food processing in the state, the Markets Division oversees a feasibility grant program to help local governments and entrepreneurs evaluate the potential for developing or expanding agricultural processing facilities. The grants are funded by the Colorado Economic Development Commission from funds appropriated by the Colorado General Assembly.

Assistance is also given to farmers wishing to diversify their operations through processing, to Colorado companies which are interested in expansion, and to out-of-state companies considering relocation to Colorado.

In 1989-90, 21 applications for feasibility grants were reviewed, and six grants were awarded.

## Market News

Personnel of the Colorado Department of Agriculture's Markets Division attend livestock sales at the major sale yards around the state to report the movement and price of cattle exchanged in open trading. This information is made available to livestock producers. The staff also monitors and reports fresh produce and nursery marketings.

# Division of Animal Industry

## Dr. James Williams, Director

The Division of Animal Industry is responsible for animal health and control activities in the state. The division has a staff of 22 including 11 field personnel. The division works regularly with many livestock organizations, property and livestock owners, and other state and federal agencies.

The division works in close cooperation with the livestock industry and veterinary medical organizations, as well as other state and federal agencies, to protect the health, welfare, and marketability of Colorado livestock.

## Veterinary Section

This section is responsible for monitoring and minimizing brucellosis and other contagious diseases which could threaten Colorado livestock. The staff concentrate on diseases that are a threat to public health, would significantly impact the $2.2 billion livestock economy in Colorado, and which cannot be easily controlled by individual livestock owners. Control of diseases is achieved through required inspections, vaccination, supervised treatments, and other appropriate activities. The section also licenses and inspects establishments engaged in processing, handling, or transporting inedible meat products for pet foods and rendering establishments to assure compliance with sanitary standards necessary for disease control and to assure that such products are clearly labeled.

The Bureau of Animal Protection investigates complaints concerning animal cruelty or neglect. Division staff assist local animal control officials and law enforcement organizations in training and investigations of complaints. In 1989-90, 384 complaints of animal neglect or abuse were investigated by the section.

## State-Federal Burcellosis Laboratory

The State-Federal Brucellosis Laboratory provides support for livestock disease identification, control, and prevention. The lab issues quarantines based on serological tests, provides support for prosecution of quarantine violations, and confirms livestock disease trends. Lab staff also trains public livestock market veterinarians in test procedures and confirms testing of livestock at such markets.

Training in field test procedures were conducted in 1989-90 for 40 persons, and over 234,000 serological and other laboratory tests for livestock diseases were performed.

## Rodent/Predator Control Section

In Colorado, millions of acres of private and public lands are damaged to some degree by prairie dogs, gophers, and other rodents. The Animal Industry Division's Rodent/Predator Control Section provides training, services, and supplies to private citizens and local, state, and federal officials to control vertebrate pests. The section assists producers in controlling livestock predation losses through cooperative agreements with local producer associations, counties, and the United States Department of Agriculture.

In 1989-90, the Rodent/Predator Control Section assisted approximately 2,800 private individuals in 50 counties to control rodent infestations or predator losses.

# Brand Inspection Division

## J. G. Shoun, Brand Commissioner

The Brand Inspection Division has a long history in Colorado beginning around 1860 in what was then the Colorado Territory. Today, the division administers more than 33,500 livestock brands to identify ownership of cattle, sheep, mules, burros, and horses. Brand inspection is crucial to verify ownership in cases of strayed or stolen livestock, and animal health programs are strengthened by the ability to trace animals to their herd of origin.

The division is administered by the State Board of Stock Inspection comprised of five members representing all segments of the livestock industry. The current members of the Board are Mr. Jim Anderson of Longmont, Mr. Robert Jutten of Montrose, Mr. Lee Spann of Gunnison, Mr. Tom Spencer of Pueblo, and Mr. Robert E. Bledsoe, of Wray.

The division employs 60 brand inspectors located throughout the state, 8 brand foremen, and 9 administrative personnel, including Brand Commissioner J. G. Shoun. The annual budget for the division exceeds $2 million and is completely funded by inspection fees levied to livestock owners and brand registration fees levied every five years.

The division is assigned four principal regulatory responsibilities:

- Record and administer livestock brands;
- Inspect livestock and verify ownership before sale, transportation beyond 75 miles, or slaughter;
- Inspect and license livestock sale rings and inspect all consignments before sale to verify ownership; and
- prevent and return strayed or stolen livestock: and investigate reports of lost or stolen livestock.

In addition, brand inspectors collect beef promotion and research funds. The division is also the trustee for all surety bonds issued to licensed markets and packing houses doing business in Colorado.

In 1989-90, the Division inspected approximately 5.1 million head of livestock. In addition, they identified ownership of lost, stolen, or strayed and questionably owned livestock valued at $14 million.

# Inspection and Consumer Services Division

## Ronald Turner, Director

The The Division of Inspection and Consumer Services consists of six sections and the Marketing Orders Program. The division employs over 100 individuals in a variety of inspection programs designed to assure fairness in the marketplace and quality, safety, and financial soundness in other commercial transactions.

### Marketing Orders Program

Marketing orders are producer-funded programs which collect funds from the point of first sale (except beef) of farm commodities. The funds are used to promote the consumption of those products, to fund specialized research on production techniques and problems of that commoditiy, and in some cases, for inspection services in order to assure that only high-quality commodities reach the marketplace.

Colorado has marketing orders for eight commodities produced in the state covering apples, field corn, potatoes, dry edible beans, sweet corn, broccoli, milk, and wheat. The marketing order for peaches was discontinued in 1989 by a referendum of producers.

The department's responsibilities involve establishing, enforcing, and overseeing the administration of the marketing orders. In addition, the program serves to enforce the marketing order rules and regulations by conducting investigations, holding hearings, and reviewing audits of the orders.

The agency reviewed budgets for the nine marketing orders and approved expenditures totaling over $1.9 million. In addition, the agency held three conferences with the managers and chairmen of the marketing boards to develop a package of administrative changes relating to the operations of the marketing orders.

## Technical Services

The Technical Services section consists of five programs: Feeds, Fertilizers, Eggs, Meats, and Facility Operations.

The feeds program registers and selectively samples commercial animal feeds throughout the state. In 1989-90, staff conducted approximately 8,000 inspections on 60,000 tons of feed, analyzed 5,000 samples, and registered an estimated 8,000 products. In addition, the inspectors issued 650 stop-sales orders on deficient products. In cooperation with the U.S. Food and Drug Administration, 20 inspections were made on medicated feed mills in Colorado.

The fertilizer program registers and selectively samples fertilizers, soil conditioners, and related products to determine nutrient content and to assure labeling accuracy in accordance with state laws. Nearly 350 companies are regulated encompassing 2,560 products. In 1989-90, approximately 4,500 inspections were made of fertilizer and soil conditioning products, and 1,700 samples were analyzed representing 48,500 tons of product. Inspectors issued 450 stop-sales orders on deficient products and equipment.

The fertilizer program also inspects anhydrous ammonia tanks and assists in safety training in the use of this potentially dangerous product. Inspectors examined 4,150 tanks of ammonia in 1989-90 and rejected 540 of them as unsafe.

The egg program inspects eggs for wholesomeness at wholesale and retail levels. Under the egg inspection program, over 2 million dozens were inspected in 1989-90 resulting in the rejection of 47,500 dozens. Improved training for inspectors in this area has resulted in an 18% increase in volume inspected and a 29% increase in rejections.

The Meat Inspection Program licenses and inspects meat processors. In addition, the agency protects the public from unsanitary or fraudulent practices in custom meat processing and bulk meat sales.

In 1989-90, this program issued licenses to 155 facilities in the state. Nineteen cease and desist orders were issued to meat processors in the fiscal year. One license was denied due to unsanitary facilities. Over 300 such facilities were inspected during the year.

## Facility Operations

The Facility Operations program operates the two state-owned buildings occupied by the Division of Inspection and Consumer Services. In 1989-90, the section undertook an overhaul of the heating, ventilation, and air conditioning of the buildings. Funding was also obtained to implement a building expansion project to add a two story addition to the biochemical laboratory. Construction is expected to begin in 1991.

## Farm Products

The Farm Products section is responsible for the enforcement of statutes licensing those who buy, transport, or store agricultural products produced in Colorado. The agency assures that dealers and state-licensed warehouses are bonded and adequately capitalized. The section licensed nearly 5,000 firms.

The section investigates complaints by producers and issues cease and desist orders in the event that a firm appears to be financially unable to meet its commitments. In addition, the section conducts investigations regarding complaints of timely payment for livestock purchased for slaughter. In 1989-90, 150 such orders were issued, and 300 investigations were conducted.

## Laboratory Services

The Laboratory Services section analyzes animal feeds and fertilizer product samples obtained by multiple inspectors in the division, and the lab also analyzes pesticide samples for the Plant Industry Division.

The laboratory checks animal feeds and pet foods registered in the state to assure that feed products conform to the manufacturer's labels for both nutrients and that they are free of contamination. The lab, under contract with the U.S. Environmental Protection Agency, conducts the analysis of agricultural and home fertilizers to assure that they meet manufacturers' claims, pesticide formulations for label consistency, and analyzes pesticide residue samples to aid in the investigation of possible misuse or misapplication.

In 1989-90, the section analyzed a total of 31,000 samples.

## Measurement Standards

This program licenses all weighing and measuring devices in commercial use in Colorado and certifies persons operating public scales. The State Standards Laboratory maintains custody of Colorado's official weight and measure standards, and the laboratory provides testing, certification, and calibration of mass, frequency, length, and volume for public and private agencies that require standards traceable to the National Institute of Standards and Technology.

This section also tests packages for truth in labeling. Under an agreement with the National Institute of Standards and Technology, the section staff also calibrates measuring devices for other laboratories and commercial entities.

More than 26,000 small weighing devices were tested in 1989-90, and of those, over 1,000 were inaccurate. Inspectors examined 26,000 packages and discovered 3,500 packages which contained short measure.

In 1989-90, the Measurement Standards Section certified over 4,200 large weighing and measuring devices averaging approximately a 12% error rate resulting in rejected certification. The Metrology Laboratory conducted nearly 7,000 mass standard tests and 700 other standards tests. The Metrology Laboratory also certified 850 tuning forks for proper frequency for use by local law enforcement agencies to calibrate radar speed detectors.

## Fruit and Vegetable Inspection

The Fruit and Vegetable Inspection program is a cooperative effort by the U.S. Department of Agriculture and the Colorado Department of Agriculture to assure consumers of high quality Colorado produce. The programs operates under federal standards, rules, and regualtions to provide official inspection, grading, and certification of produce. The certification concerns quality, condition, size, and other pertinent factors of fresh fruits and vegetables grown in the state.

Inspections are performed on either a mandatory or non-mandatory basis. Mandatory produce inspection is required by statute to promote quality standards which depict Colorado's peaches and potatoes as desirable products in the marketplace. Non-mandatory inspections are conducted for other commodities for shippers which wish to market an inspected product. Inspection certificates are issued by the state to certify grade and condition of the product at the time of inspection.

In 1989-90, the section inspected an estimated 16,141,635 million hundredweight (cwt.) of potatoes and issued 36,000 certificates. Other fruits and vegetables inspected totaled 360,000 cwt. resulting in 3,200 certificates issued. No certificates were issued for Colorado peaches due to a severe freeze which eliminated the entire 1989 crop.

## Field Services

The field services section has the responsibility of directing all personnel involved in the inspections, testing and/or sampling for the following programs: Feed, Fertilizer, Eggs, Measurement Standards (small devices), Farm Products, and Meat Inspection. Each inspector in the section has been trained to perform inspections in all six program areas.

Fifteen inspectors strategically located throughout the state perform the various inspections required for each program. Inspectors are empowered to enforce the laws and regulations relating to each program.

# Division of Plant Industry

## Robert I. Sullivan, Director

The Colorado Department of Agriculture's Division of Plant Industry performs a wide array of services to the public and engages in several important environmental and public health protection programs.

Beginning as the Bureau of Plant and Insect Control in 1937, the agency was under the direction of the State Entomologist. The division is organized into the Biological Pest Control, Pesticides, and the Plant and Insect sections. The division employs a staff of 27, including 14 field inspectors. Eleven of the field inspectors are cross-trained in multiple inspection, and five are trained in biological pest control functions.

## Biological Pest Control

In 1947, the Bureau of Plant and Insect Control developed the state's initial biological pest control program in Palisade, Colorado at the Colorado Insectary. Biological pest control affords the opportunity to decrease agriculture's reliance on chemical pest control technology thereby decreasing production costs, reducing a portion of the chemicals entering the environment, and, when colonies of beneficial insects are established, if offers a permanent pest control solution.

In 1989-90, the Insectary conducted 269 releases of 16 species of insects for both insect and plant pest control. The Biological Pest Control Program targets eight insect pests and six weed pests throughout the state, often rearing multiple species of insects which compliment each other to control one targeted pest.

The recent appropriation of $1.1 million by the General Assembly to construct a new insectary facility in Palisade will increase the scope of the program four-fold. The new facility should be completed by May, 1991.

## Plant and Insect Section

This section inspects plants and plant products intended for export to provide certification required by receiving states and countries; licenses sellers of nursery stock and provides inspection of that stock to aid in control of insects and diseases and to aid consumers in purchasing high quality stock; performs request inspections of apiaries for bee diseases; conducts pest surveys and works with private and public agencies to control certain pests; and the section administers the Colorado Chemigation Act to avoid pollution of groundwater sources.

The section also inspects commercial seed dealers to assure truth in labeling of seed as to content and germination claims. Under recent legislation, the section also administers the organic production certification program to assure buyers of organic produce that they are purchasing produce grown without the aid of synthetic fertilizers and pesticides.

In 1989-90, the section issued approximately 600 phytosanitary inspection certificates on plant products for international export valued at $15 million. Inspectors conducted 900 inspections of nurseries and greenhouses and issued 1,400 licenses to sellers of nursery stock. Nearly 5,000 stop sales orders were issued.

The implementation of the chemigation program began in 1989-90. For FY 89-90, 700 chemigation systems have been inspected, and 3,800 chemigation permits have been issued. Approximately 875 inspections of seed dealers were conducted, and 625 stop-sales orders were issued for violations of labeling.

## Pesticides Program

The Pesticides Section registers pesticides and licenses and certifies commercial pesticide applicators. Its activities assure proper labeling, packaging, display, formulation, and effectiveness of pesticide products; examines pesticides for special, local needs and emergency exemptions; and assures competency of commercial pesticide applicators.

In 1989-90, approximately 8,000 pesticide products were registered in Colorado; 450 applicators were examined for competency; 650 application business licenses were granted; 1,950 commercial applicators were certified, 60 complaints of misuse of pesticides were investigated; and 16 administrative actions or letters of warning were issued.

# How To Contact the Colorado Department of Agriculture

## Office of the Commissioner,

1525 Sherman Street, Room 406, Denver, 80203

# INDEX

**Acreage:**
    By cropping practice 11, 12
    Harvested
        Principal crops, Colorado 4, 14-16
    Planted
        Principal crops, Colorado 4, 14-16

**Apples:** 111

**Barley:**
    Acreage 4, 6, 11, 52-59
    County estimates 54-59
    District estimates 52, 53
    Prices 6, 19, 119, 120
    Production 6, 11, 14-16, 52-59
    Stocks 105
    Value 6, 14-16, 19, 21-26
    Varieties 108
    Yield 6, 11, 14-16, 52-59

**Beans, dry edible:**
    Acreage 4, 9, 14-16
    County estimates 78-80
    District estimates 76, 77
    Prices 6, 20, 119, 120
    Production 9, 12, 14-16
    Value 9, 14-16, 20-26
    Yield 9, 12, 14-16

**Beef cattle:**
    Inventory 126, 127
    Inventory by county 132
    Prices 119, 122

**Carrots:** 112

**Cash receipts:** 116, 118

**Cattle and calves:**
    Calf crop 126, 136
    Inshipments 136, 138
    Inventory by county 132
    Inventory by class 126, 127
    Marketings 136
    On feed by class 140
    On feed by month 139
    On feed by weight group 140
    Prices 119, 122
    Production 136
    Slaughter 136, 137
    Value 145

**Cheese:** 142

**Cherries:** 111

**Chickens:**
    Inventory 126, 143
    Hens and pullets 126, 144
    Prices 119, 143, 144
    Value 143, 144

**Corn, all:** 4, 14-16

**Corn, grain:**
    Acreage 6, 12, 14-16, 40-47
    County estimates 42-47
    District estimates 40, 41
    Prices 6, 14-16, 18, 119, 120
    Production 6, 12, 14-16, 40-47
    Stocks 106
    Value 6, 14-16, 18, 21-26
    Yield 6, 12, 14-16, 40-47

**Corn, silage:**
    Acreage 6, 14-16
    County estimates 50, 51
    District estimates 48, 49
    Prices 6, 14-16, 18, 119
    Production 6, 14-16
    Value 6, 14-16, 18, 21-26
    Yield 6, 14-16, 48-51

**County estimates:**
    Barley 54-59
    Corn, grain 42-47
    Corn, silage 50, 51
    Dry beans 78-80
    Hay crops 83-88, 91-96, 99-104
    Oats 62-67
    Potatoes 74
    Sorghum, grain 70-72
    Sugar beets 73
    Wheat, spring 37-39
    Wheat, winter 29-34

**Cows, all:**
    Inventory 126, 127

**Cows, beef:**
    Inventory 126, 127
    Inventory by county 132
    Prices 119

**Cows, milk:**
    Inventory 126, 141
    Inventory by county 132
    Prices 119, 123

**Crops:**
- Acreage 4-12, 14-16
- Cash receipts 116, 118
- County & district estimates 35-104
- Planting & harvesting dates 114
- Production index 3
- Review 13
- Marketing year prices 119
- Value of production 5-10, 14-26

**Cucumbers for pickles:** 112

**Dairy products:** 141, 142

**District estimates:**
- Barley 52, 53
- Corn, grain 40, 41
- Corn, silage 48, 49
- Dry beans 76, 77
- Hay crops 81-82, 89-90, 97-98
- Oats 60, 61
- Sorghum, grain 68, 69
- Sugar beets 73
- Wheat, spring 35, 36
- Wheat, winter 27, 28

**Eggs:** 144

**Expenses, farm production:** 116, 131

**Farms and land in farms:** 3, 131

**Farm income:** 116

**Feedlots:** 138

**Floriculture:** 113

**Fruit:** 110, 111, 114

**Government payments:** 116

**Grain stocks:** 105-107

**Hay:**
- Acreage 4, 10, 14-16, 81-104
- County estimates 83-88, 91-96, 99-104
- District estimates 81-82, 89-90, 97-98
- Prices 10, 14-16, 119, 121
- Production 10, 14-16, 81-104
- Stocks 107
- Value 10, 14-16, 20-26
- Yield 10, 14-16, 81-104

**Hogs & pigs:**
- Cash receipts 118, 136
- Disposition 136
- Inventory by county 132
- Inventory by class 126, 129
- Marketings 136
- Pig crop 126, 130
- Prices 119
- Production 136
- Slaughter 136, 137
- Sows farrowing 126
- Value 136, 145

**Ice cream:** 142

**Lambs:**
- Prices 119, 123
- Lamb crop 126, 136

**Land in farms:** 3

**Lettuce:** 112

**Livestock:**
- Cash receipts 116, 118, 136
- Disposition 136
- Inshipments 130, 136, 138
- Inventory by county 132
- Inventory by class 126
- Operations by specie 126
- Prices 119, 122, 123
- Production & disposition 136
- Production index 3
- Review 125
- Slaughter 137
- Value 145

**Milk:**
- Disposition 142
- Manufactured products 142
- Milkfat 141
- Prices 119, 123, 142
- Production 141
- Value 142

**Oats:**
- Acreage 4, 7, 14-16, 60-67
- County estimates 62-67
- District estimates 60, 61
- Prices 7, 14-16, 19, 119
- Production 7, 14-16, 60-67
- Stocks 107
- Value 7, 14-16, 19
- Yield 7, 14-16, 60-67

**Onions:** 113

**Pasture & range condition:** 145

**Peaches:** 111

**Pears:** 111

**Potatoes:**
  Acreage 4, 8, 14-16, 74
  County estimates 74
  Disposition 75
  Prices 8, 14-16, 20, 119
  Production 8, 14-16, 74
  Stocks 75
  Value 8, 14-16, 20-26
  Yield 8, 14-16, 74

**Poultry:** 126, 143, 144

**Prices received:** 119-123

**Rye:** 4, 9, 14-16

**Sheep & lambs:**
  Cash receipts 118, 136
  Disposition 136
  Inshipments 130, 136
  Inventory by county 132
  Inventory by class 126, 136
  Lamb crop 126, 136
  Marketings 136
  Number shorn 130
  On feed 126
  Prices 119, 123
  Production 136
  Slaughter 136, 137
  Value 145

**Slaughter, livestock:** 137

**Sorghum, all:** 4, 14-16

**Sorghum, grain:**
  Acreage 4, 7, 12, 14-16, 68-72
  County estimates 70-72
  District estimates 68-69
  Prices 7, 14-16, 19, 21-26, 119
  Production 7, 12, 14-16, 68-72
  Stocks 106
  Value 7, 14-16, 19, 21-26
  Yield 7, 12, 14-16, 68-72

**Sorghum, silage:**
  Acreage 7, 14-16
  Prices 7, 119
  Production 7, 14-16
  Value 7
  Yield 7, 14-16

**Sugar beets:**
  Acreage 4, 9, 14-16, 73
  County estimates 73
  District estimates 73
  Prices 9, 14-16, 119
  Production 9, 14-16, 73
  Value 9, 14-16
  Yield 9, 14-16, 73

**Sweet Corn:** 112

**Tomatoes:** 112

**Vegetables:** 110, 112, 113

**Wheat, all:**
  Acreage 4, 5, 11, 14-16
  Prices 5, 14-17, 119,120
  Production 5, 14-16
  Stocks 105
  Value 5, 14-17, 21-26
  Yield 5, 14-16

**Wheat, spring:**
  Acreage 5, 11, 14-16, 35-39
  County estimates 37-39
  District estimates 35, 36
  Prices 5, 14-16, 18, 119
  Production 5, 11, 14-16, 35-39
  Value 5, 14-16, 18
  Yield 5, 11, 14-16, 35-39

**Wheat, winter:**
  Acreage 5, 11, 14-16, 27-34
  County estimates 29-34
  District estimates 27, 28
  Prices 5, 14-16, 119
  Production 5, 11, 14-16, 27-34
  Value 5, 14-17
  Varieties 108, 109
  Yield 5, 11, 14-16, 27-34

**Wool:**
  Prices 119, 123, 130
  Production 130
  Value 130

## WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts, and crop and livestock reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing.

They are essential in enacting wise legislation affecting Agriculture.

They are a check on fluctuation in price. Uncertainty of supply promotes undue fluctuation in price.

They are the basis for analysis of agriculture and other business conditions.

They give producers the same foresight to future price trends that organized dealers possess.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools, local communities, Economic Development Councils, and others in planning constructive programs.

They eliminate the ill effects of misleading reports that might be circulated for private gain, if there were no official reports.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They indicate potential buying power, enabling the manufacturer to meet the probable demand. With economical production and distribution, the manufacturer can sell at a lower price than he could with uncertain demand.

They reduce the risk for ownership of buyers of farm products which enables them to do business on a smaller margin. Under the stimulus of competition, they pay producers higher prices than could be paid if uncertainty of production existed.

They reduce the amount of speculation in farm products. Speculation thrives on uncertainty. Unbiased official crop reports reduce uncertainty which limits speculation.

They are indispensable in times of war because food is as essential as ammunition and weapons of war.

They provide an accurate, unbiased picture of Colorado's agriculture. The facts on present and prospective supplies furnish a sound basis for judgment and action by farmers, ranchers, other individuals, agribusiness, railroads, crop and livestock interests and governmental agencies.

*The Colorado Agricultural Statistics Service is a state-federal agency which gathers and publishes information on agricultural production, livestock inventories, prices, farm income and other economic indicators. These reports are based on surveys of farmers, ranchers and other agribusinesses. Please contact our office for information on subscribing to these reports.*
